

Ericom Shield Cloud Service

Zero Trust, cloud-based protection from web-borne malware and credential theft

Endpoint attacks are on the rise

94% of businesses have had malware delivered by email, and 23% report malware entering via the web*. Detection-based solutions are powerless against unknown or zero-day threats. Credential theft-sites are removed before they can be categorized as malicious – but not before phishing emails lure users in.

Shield your business from web-borne dangers

Ericom Shield Cloud Service empowers users to securely and efficiently access the essential web-based tools of every modern business – websites and email – without the risk of malware attacks or credential theft and without investment in costly infrastructure.

Secure Browsing

Ericom Shield renders websites in remote, isolated cloud-based containers and delivers only a safe interactive media stream to end-users, on their standard browser. No active content ever reaches the endpoint. Users enjoy secure, seamless, hassle-free access to the sites that they need.

Phishing Protection

When it comes to phishing attacks, user training just isn't enough. Ericom Shield executes email-embedded URLs away from endpoints, in virtual browsers in the cloud, so no malware can execute – or even reach endpoints. For extra protection from credential theft, the clean media streams sent to the endpoints can be sent in read-only mode, preventing users from entering sensitive data such as user IDs and passwords.

Document-borne Malware Protection

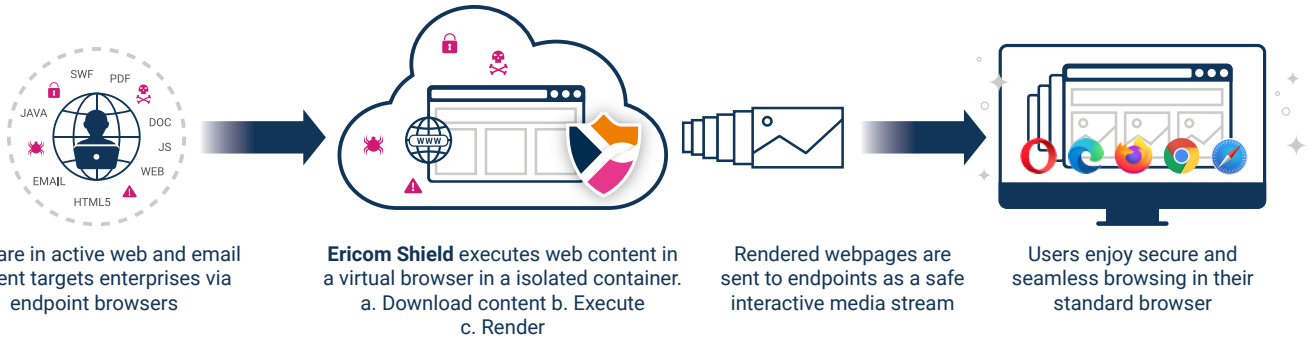

Let users download the files they need from websites and emails, without fear of embedded malware. Ericom Shield content sanitization capabilities disarm embedded threats then reconstruct and deliver safe files, with native functionality intact.

Ericom Shield Cloud Service

- Websites are rendered in isolated cloud-based containers, so no active content ever reaches endpoints
- Proxy-based access – easily integrates with all secure web gateways
- URL redirection to Shield Cloud Service
- Sensitive data from web apps is not stored in browser cache
- Zero installation on the endpoint
- Works with any endpoint browser, device and OS
- Embedded URL filtering
- Category-based policy management
- Comprehensive activity reporting and logging

Ericom Shield Cloud Service

Ericom Shield Cloud Service Improves Security While Reducing Cost and Complexity

- Neutralizes the most prevalent cyber attack vectors -- browsing & email
- Keeps employees productive by providing a secure, cost-effective native browsing experience
- Protects users from sophisticated social engineering, credential theft and phishing attacks
- Air-gaps browser-executable code, email links and downloads away from endpoints
- Opens each tab in a unique, disposable container to eliminate cross-site scripting attacks
- Simplifies IT operations by minimizing false positives and helpdesk calls
- Works with all browsers, devices and operating systems
- Flexibly scales as organizations need to add isolation to cover incremental users

What's Running in Your Browser?

Typical Unsecure Browsing		Ericom Shield Browsing Service	
Java Scripts	152	Java Scripts	4
CSS Scripts	3	CSS Scripts	0
External URLs	22	External URLs	0
