

# harmon.ie for iOS

full-featured access to Office 365 / SharePoint Online and SharePoint on-premise from the convenience of the iOS devices.

## Other products in the family include:

- harmon.ie for OWA
- harmon.ie for Notes
- harmon.ie for iOS
- harmon.ie for Android
- harmon.ie for BlackBerry

For more information, visit <http://harmon.ie>

## Product Benefits

### Delivering SharePoint access on the go

Access and navigate SharePoint sites directly from mobile devices. Anytime, anywhere.

### Improves project management

Get real-time updates as colleagues edit important documents, such as proposals and contracts. Reach out to the last document contributor with one click.

No more need to call or email to check on project progress.

### Boosts productivity significantly

Access important information and share it with colleagues from the road.

### Drives adoption of SharePoint social networks

Users can expand their social network by adding colleagues from their local mobile device contact list.

## About harmon.ie

harmon.ie, the user experience company for the mobile enterprise, provides products that deliver a consistent experience on mobile devices, the desktop, and the cloud, for a host of social and collaboration platforms from vendors such as Microsoft and IBM.

Thousands of businesses including Citi, DuPont and BAE Systems already use harmon.ie to become mobile enterprises.

Gold Independent

# Product Features

---

## Document sharing and browsing

Share documents easily

Upload documents to SharePoint directly from mobile devices.

Uploaded documents can then be shared by sending corresponding SharePoint links to colleagues.

Share e-mail attachments

Email attachments can be saved directly to SharePoint without the need to save them locally to the iOS device.

Simplify navigation

Mark documents and library locations as favorites, using “breadcrumbs” and a list of recently-visited locations.

Author documents on the go

Perform check-in, check-out and manage SharePoint metadata fields when authoring documents. When updating document content from a mobile device, harmon.ie prompts to save those changes to SharePoint.

## Real-time collaboration

Update activity stream

Receive colleague and document updates.

Find documents

Find SharePoint documents by performing a search, browse, sort, or ‘go to location’ operation, making it easy to find information while away from the office.

Collaborate in context

View colleagues’ complete SharePoint profiles and reach out to them via e-mail or phone.

## Social features

Search for people

Search colleagues in SharePoint by entering department, skills, expertise and other keywords.

“Last Modified By”

This field reveals which colleague was the last person to modify a document. Selecting a colleague’s name navigates to their full SharePoint profile.

Reach out to contacts

Contact colleagues via phone or email. Users can view colleagues’ complete SharePoint profiles and reach out to them via e-mail or phone.

# Enterprise Features

---

## Central app deployment

Organizations can choose to deploy harmon.ie Mobile in two ways:

- MDM software
- A free harmon.ie Mobile Enterprise Edition app available on iTunes together with a harmon.ie server component (Sandbox compatible) that is installed on the SharePoint server

## Centralized site provisioning

IT administrators can provision sites to specific audiences. End users can then find their provisioned sites via an e-mail link or site lookup.

## Share sites and favorite locations

harmon.ie automatically shares sites and ‘favorite’ locations across harmon.ie desktop and mobile products. Users achieve a consistent SharePoint work experience everywhere.

## Consistent SharePoint experience

harmon.ie automatically shares document and social updates between desktop and mobile activity streams. The unified activity stream provides a consistent SharePoint work experience everywhere.
