booth #527

NVIDIA virtual GPU delivers cost-effective performance. Doctors, nurses, and staff can have access to virtualized EMR applications, PACS, and business applications, anywhere, on any device with a consistent user experience.

- ✓ Enhance Productivity and Mobility
- ✓ Reduce Infrastructure Costs
- ✓ Enhance Security

NVIDIA DELIVERS RESULTS FOR HEALTHCARE CUSTOMERS

- Saved **30-50** minutes per day for doctors and nurses through fast roaming access

- **100+** radiology stations using virtual workstations resulting in increased accuracy and speed of image interpretation

- Enabled **2x** user density at 2/3 cost on Windows 10 VDI with NVIDIA GRID

- IT department remained flat while the total number of endpoints has grown by **35%**

- **250,000** radiographic examinations per year can be done remotely, securely, and without image quality loss

- 2-person IT team manages **300-600** users of virtual workstations running graphics intensive dental software

With NVIDIA Virtual GPU and Citrix solution, healthcare organizations can finally realize a fully virtualized workforce, with a dramatically lower cost per user. We deliver graphic accelerated workspace that rivals performance of a physical PC, while ensuring accessibility from anywhere, keeping patient data secure, and increasing user density. All of these spell productivity and efficiency, ultimately improving quality of patient care and outcomes.

- Increase mobility and remotely supplement diagnostic work

- Cost effectively scale VDI to more users

- Broaden accessibility of patient information while ensuring data security

PRODUCT SCOPE:

- ✓ The NVIDIA Quadro Virtual Data Center Workstation (Quadro vDWS) is positioned for virtualizing PACS images used by radiologist/physicians/specialists

- ✓ The NVIDIA GRID Virtual PC/Virtual Apps (GRID vPC/vApps) is positioned for general purpose VDI in the healthcare setting

At HIMSS'19, join us to witness

- ✓ The power of NVIDIA and Citrix technologies in action

- ✓ 3D volumetric viewing and editing of medical images remotely
