World-class Customer Care

ENTUR

Lexit group

Introduction

Entur (formerly part of NSB) compiles route data, stop places and travel information from all of the Norwegian public transport companies. Entur provides services for end users, making it easy to plan, purchase and operate public transport services all over the country. In addition, Entur operates the railway's ticketing system, sales facilities at stations and customer centres on behalf of all of the train operators in Norway.

Solution delivered

Lexit Group has supplied handheld terminals and payment terminals for selling and checking tickets on all trains in Norway.

Lexit is the preferred partner for the supply of handheld terminals and payment terminals for selling and checking tickets on all Vy, Statens Järnvägar (SJ) and Go-Ahead trains as of today. For Lexit, this is effectively a continuation of previous collaborations where they have had partial responsibility. The contract also includes remote control and remote assistance solutions and support for the handheld terminals.

The main products included in the delivery consist of the Google-certified rugged smartphone Point Mobile PM45 and a new payment terminal from Verifone, the V400m. Together with the programs and apps owned by Entur, these two products constitute a complete point-of-sale solution for ticket sales, among other things. The terminal is also used for ticket checking and the verification of previously purchased tickets. Tickets can easily be purchased using any type of payment card.

The PM45 is part of Google's Android Enterprise Recommended program and runs on Android 9. As a rugged smartphone, it is IP67 certified and withstands drops from 1.2m on concrete (MIL-STD 810G). The large 5" screen with FHD resolution is daylight readable and is protected against scratches and impacts by Corning Gorilla glass.
