# SessionGuardian's Citrix Ready Technology Enhances Security Protocols for Healthcare Companies

Extend physical security controls to your hybrid healthcare organization with Continuous Identity Verification

Safeguard ePHI from Remote-Work and Third-Party Risks

01 Know the identity of users accessing sensitive data at all times

02 Mitigate malicious or accidental insider threats

03 All while enhancing HIPAA compliance controls

Customers can trust SessionGuardian's continuous identity verification software, as it has passed a series of tests established by Citrix and is compatible with Citrix Virtual Apps and Desktops. The software offers the following benefits:

- Proactive verification of the entire healthcare workforce, including third-party partners, with continuous or one-time facial authentication
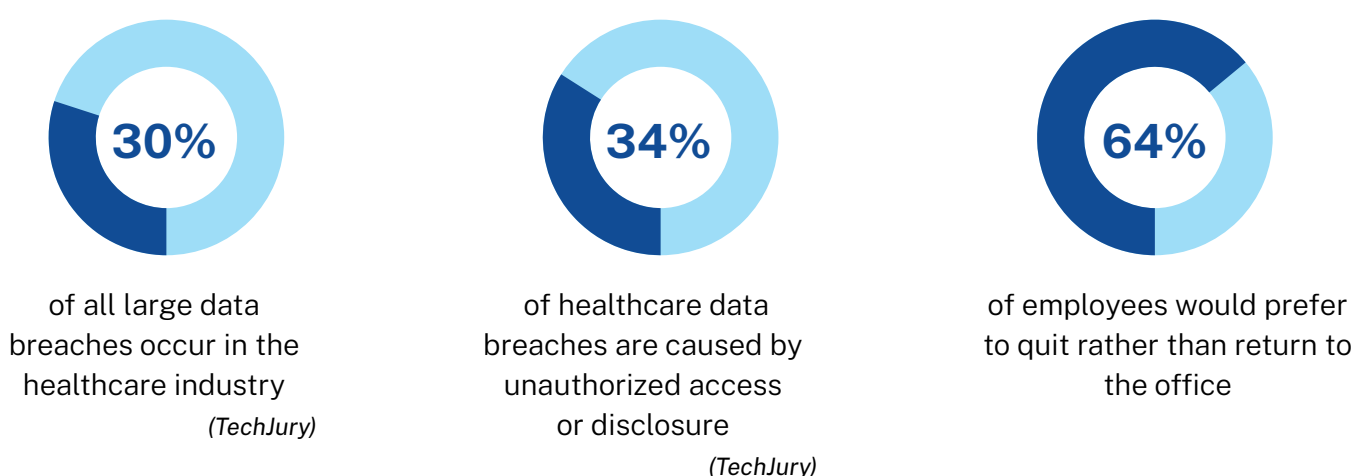

- Enhanced security protocols with disabled screenshots/screenshares, bystander detection, and smartphone camera detection and restrictions

- Protection of end-user privacy

Remote work during the COVID-19 pandemic led to a
238% increase in cyber-attacks

30% of all large data breaches occur in the healthcare industry
(TechJury)

34% of healthcare data breaches are caused by unauthorized access or disclosure
(TechJury)

64% of employees would prefer to quit rather than return to the office

SessionGuardian can provide the same physical security controls in a hybrid working environment saving organizations

$11k per user
(working 2-3 days remote)
per annum in RTO costs

$22k per user
(working 5 days remote)
per annum in RTO costs
