**Military-Grade Encryption . Award-Winning Solution. Unrivalled Simplicity**

# Use Case: Business Travellers

## Road Warriors and Business Travellers

The global workforce is getting mobile and there is increasing trend of road warriors and business travellers in the corporate world. Business communications for such road warriors and business travellers remain essential and access to sensitive information remains critical to such mobile workforce.

However, during business travels or mobile working arrangements, the business travellers' mobile devices may often be connected to unsafe networks or untrusted Wifi. This will compromise sensitive communications that traverse across such unsafe and untrusted networks.

For example, a business traveller may be preparing for a major contract negotiations and may want to discuss with his management on sensitive price issues. However, if such discussions are compromised and leaked, it could result in the loss of business opportunities and impact on the company.

Furthermore, different territories have begun to ban or disallow certain free messaging apps to be used. This will further complicate the issue where business travellers are now forced to use messaging or communications apps that are allowed, which can be insecure.

## What the business travellers are looking for?

- Ability to communicate safely and privately with their senior management
- Ability to deploy across common platforms – iPhones, iPads, Android, Tablets.
- Ability to download documents and review documents
- Ability to send audio notes securely
- Ability to roam in different territories and yet can facilitate secure communications

## OnTalk® – Designed for Business Travellers

OnTalk® is designed for business travellers. With OnTalk®'s proprietary protocols and designs, OnTalk® is able to traverse across majority of the mobile operators without fear of being blocked or disallowed.

Even in regions where the mobile operators may be able to block OnTalk®, OnTalk® VPN will allow the business traveller to traverse securely and able to communicate safely with the company's HQ.

With OnTalk® business travellers can also have a peace of mind and ensure that the callee or recipient is authenticated so that the sensitive information does not fall into the wrong hands.

OnTalk® is designed to be tied to the mobile device without tying to the sim card. This allows the business traveller to use local sim cards with data plan and yet enjoys the security that OnTalk® provides.

OnTalk® is the secure companion for Business Travellers.

# OnTalk<sup>®</sup>, Protects your privacy

## OnTalk<sup>®</sup> – Your Privacy is our Priority.

OnTalk<sup>®</sup> is an award-winning solution that is designed to protect the Enterprise sensitive conversations on mobile devices. OnTalk<sup>®</sup> secures voice calls, conference calls, instant messaging, attachments and SMS. Embedded with the strongest encryption algorithms and security protocols, OnTalk<sup>®</sup> aims to deliver the highest assurance to Enterprises. Not only OnTalk<sup>®</sup> is extremely easy to use and deploy, OnTalk<sup>®</sup> also provides options for Enterprises to own and have full centralized control of users. Enterprises can dynamically create, amend, delete users and manage the secure services that are granted to each user. This solution gives control back to the Enterprises.

## Why Customers Choose OnTalk<sup>®</sup> ?

- **Secure & Trusted Solution - Developed by Security Professionals:** OnTalk<sup>®</sup> is developed by a team of experience security professionals. Backed with many years of relevant experience, TreeBox understands the security requirements and ensures that optimal performance is delivered to customers in a robust, reliable and resilient manner.
- **One-Touch Design Concept - Extremely Useable:** At TreeBox, we believe that any security solution must be designed with the user in mind. A secure but inconvenient solution will not be useful. Instead, TreeBox adopts a design principle - "One-Touch Concept" where all basic functionalities can be accessed via One-Touch from the user. TreeBox has impressed customers with the extremely useable solutions.
- **Innovation - TreeBox developed OnTalk<sup>®</sup>.** The entire solution is developed in-house and TreeBox has filed two international patents for its innovation.

## About TreeBox Solutions – Raising the benchmark in mobile security

A pioneer in military-grade secure communications solutions, TreeBox has grown to become a leading mobile secure communications provider across Asia Pacific. With deployments in more than 14 countries and with offices in Singapore, Japan and USA, TreeBox provides best secure solutions for customers.
