wandera

Richer insights. Deeper visibility across mobile

Protect your data | manage your usage

While mobile working has transformed the workplace for the better, it's also created new and difficult challenges for IT leaders. Managing these challenges is crucially important to enterprise security teams as the mobile threat landscape matures and develops.

This is where Wandera fits in. Wandera offers organizations a complete solution, harnessing the power of unique gateway infrastructure and machine learning to provide a leading mobile security and data management solution.

Mobile security

All security strategies start with visibility. It is a critical component in identifying unwanted risk and dealing with threats as they emerge.

Reduce your risk	Defend against threats
Detect vulnerabilities Discover risky configurations in each device, such as an outdated OS or evidence of a jailbreak.	**Prevent the attack** With access to the network itself, threats like phishing attempts and malware can be intercepted before they even reach the target.
Uncover data leaks Real-time scans help you find leaky sites and apps, blocking potential data breaches at the source.	**Detect the threat** Using real-time behavioural analysis, even undiscovered, zero day threats can be identified on infected devices.
Employee misuse Monitor and enforce policies that prevent shadow IT, block access to risky content and stop rogue file-sharing.	**Contain the damage** Once a device is compromised, stop attackers from exerting remote control and block the data from exfiltration.

Data management

Wandera offers a solution that enables productive mobile working, while alleviating concerns around growing costs, access to inappropriate content and shadow IT.

Manage rising costs	Enforce acceptable use
Analyze usage Get detailed usage reports on work devices and corporate data, encompassing both roaming and Wi-Fi.	**Ensure compliance** Enforce your corporate usage policies, filtering content deemed inappropriate for work.
Control consumption Use flexible filtering, capping and compression features to keep data usage manageably small.	**Segment personal use** Work devices are regularly used for personal use. Wandera helps you define and understand the split.
Eliminate overages Prevent unexpected charges at the end of your billing cycle by implementing sensible policies.	**Comply with regulation** Avoid HR or legal implications arising from employee activity on business-assigned devices.

Unparalleled visibility

Wandera is the only technology able to scan traffic in real-time, with data vectored through Wandera's web gateway for mobile without any latency or battery degradation. This means data can be analyzed as it is used, with filters, caps and controls implemented as the data is in transit.

DEVICE PROTECTION → NETWORK PROTECTION → INTERNET

Largest data set

This unmatched visibility generates huge volumes of data. MI:RIAM, Wandera's security engine, analyzes more than a billion data points every single day. Powered by machine learning, MI:RIAM regularly uncovers new strains of malware and zero day threats as they emerge.

DATA → MI:RIAM MACHINE LEARNING

95% | growth in mobile security breaches throughout 2017

30% | typical data cost savings with data management in place

Industry recognized

With widespread customer and analyst recognition, Wandera stands out for its pioneering approach to mobile security and data management. Wandera has been named as a representative vendor in Gartner's 2017 Market Guide for Mobile Threat Defense. The International Data Corporation named Wandera as a leader in its 2017 IDC MarketScape guide.

Powerful partnerships

With flexibility at its core, Wandera can be incorporated into existing infrastructures thanks to features like our SIEM integration and EMM Connect. Wandera offers deep integrations with leading EMM technologies, including AirWatch, MobileIron, Citrix, MaaS360 and Intune. For select partners, Wandera offers over-the-air (OTA) functionality, allowing for seamless, simple deployments at scale.

wandera

Wandera is the global market leader in enterprise mobile security, delivered through its pioneering web gateway. Providing maximum visibility into mobile data, Wandera goes beyond threat detection to prevent attacks and contain data leakage. The solution's threat intelligence is powered by MI:RIAM, a real-time security engine that analyzes the industry's largest mobile dataset to uncover new vulnerabilities and zero-day threats as they emerge.
